

Cross-Corpus Transfer · Genesis → Alice

Unlearned fixed input · one token per word · ASCII bytes + D* digest co-resident in D=32 vector

Train: Genesis Ch.1–10 (1,743 words) · Test: Alice Ch.I (872 words)

D=32 CTX=32 words QKV(16/16) 256×2 MLP unlearned lr=2e-4 100 epochs Vw=351

PHASE I · MEMORISATION

Ep 1–60

Train descends 5.06→3.81.
Test diverges to 9.26. Model locks onto Genesis vocabulary.
Gap reaches +5.4.

PHASE II · COLLAPSE

Ep 60–76

Train rises 3.81→6.18. Adam momentum overwhelms.
Genesis attractor broken.
Necessary boundary condition.

PHASE III · REAL LEARNING

Ep 76–100

Both curves converge. Gap compresses to +0.28. Digest geometry — not vocabulary — becomes the signal.

FINAL STATE · EPOCH 100

Train loss · Genesis

4.8723

signal 0.9885 nats

Test loss · Alice

5.1484

signal 0.7124 nats

Gap · generalisation

+0.276

random baseline 5.861
